Adaptability

Find your missing element with Thermo Fisher Scientific.

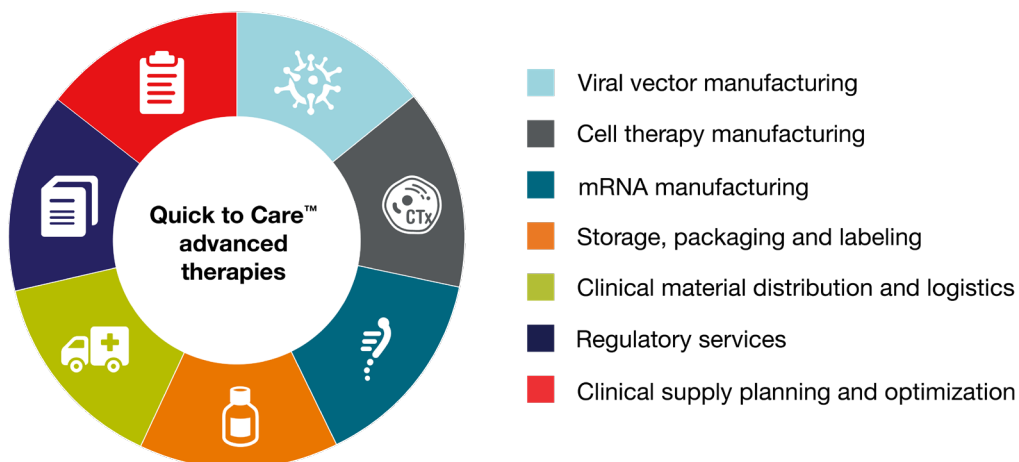

Delivered with capacity and compassion

Quick to Care™ advanced therapies

Streamline your path to the clinic with comprehensive, flexible, integrated solutions

Realizing the promise of advanced therapies requires the development of a robust plan, and following through on that plan with flawless execution. Between raw material and manufacturing capacity shortages, competition for talent, and accelerated regulatory pathways, time is short and resources are scarce on the path to commercialization. In addition, it's vital to consider the interconnected nature of manufacturing and supply chain services, as a minor delay in one aspect can translate to potential downstream consequences and delays in patient access to treatment.

Patheon™ Quick to Care™ advanced therapies streamlines contracting, communication, and coordination between all aspects of the value chain by integrating our manufacturing and distribution solutions across our network. By contracting for two or more services in our advanced therapies portfolio, you receive additional support to manage your program and move materials between sites.

Learn how we can support your advanced therapy's journey from development to delivery.

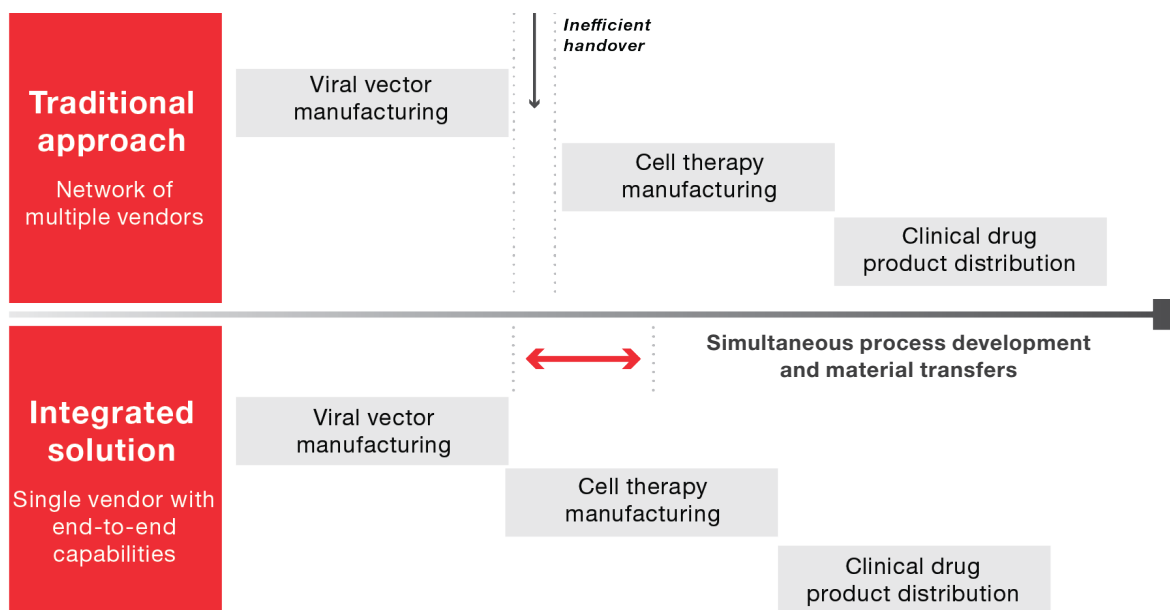

Experience breeds success

The **Quick to Care™** program launched in 2015 supporting small and large molecule drug substance, drug product, and clinical supply projects. In 2023, Thermo Fisher supported 83 Quick to Care™ integrated programs. This same expertise and infrastructure are now expanded to advanced therapies, signaling Thermo Fisher's continued investment in this critical and fast-growing segment and commitment to delivering excellent customer experiences.

- 20+ years of GMP manufacturing experience for advanced therapies
- 700+ viral vector GMP clinical and commercial/PPQ lots manufactured in NA and Europe
- Global network consisting of 15+ facilities worldwide supporting cell and gene therapy solutions
- State-of-the-art facility design, equipment, and reagents, including access to Thermo Fisher CTS™ portfolio

Reduce complexity with an integrated solution

Reducing the number of suppliers and touch points through participation in the **Quick to Care™** program helps to minimize risk and eliminate inefficiencies so cell and gene therapy innovators can focus their resources on other critical tasks.

Additional features of the **Quick to Care™** program to simplify and elevate overall customer experiences include:

- **Global program manager:** Provides communication coordinated through a centralized point of contact, reducing efforts to manage multiple projects across different providers
- **Single invoicing entity:** Simplifies process to track and pay invoices
- **Integrated timelines:** Enables agile planning with transparency to full view of cost and timeline burden
- **Single MSA and contracting process:** Reduces contracting burden as terms cover all relevant services
- **Global governance process:** Provides a clear escalation process
- **Total transportation management:** Ensures product integrity and on-time delivery through overarching insights and management of your entire supply chain

Reduce complexity and risk in your value chain by leveraging a single vendor from raw materials through drug product manufacturing and distribution.
