Thermo Fisher Scientific Unveils \$6 Million Expansion at Viral Vector Manufacturing Facility

Investment doubles the site's process development capabilities and establishes commercial testing

ALACHUA COUNTY, Fla (November 22, 2019) – Thermo Fisher Scientific, the world leader in serving science, today unveiled the \$6 million expansion of its gene therapy and viral vector services site in Alachua, Florida. The investment doubles the site's laboratory and warehousing capacity for upstream process development and quality control testing of gene therapy products.

The expansion at the Alachua facility is part of Thermo Fisher's \$270 million investment this year to expand its capabilities, capacity and talent globally to enable its customers to develop and deliver high quality medicines to patients around the world. This investment follows the company's recent acquisition of Brammer Bio, a leader in viral vector manufacturing.

"The team at our Alachua site has more than 12 years of expertise developing processes, analytics and manufacturing GMP materials to help our customers with clinical development of advanced medicines for rare and complex diseases," said Chris Murphy, vice president and general manager, viral vector services at Thermo Fisher. "This investment in Alachua signifies our continued commitment to serve our gene therapy customers and their patients in need."

"Thermo Fisher's investment to expand here in Alachua highlights our reputation as a destination for the biotech industry," said Eric Godet, CEO of the Greater Gainesville Chamber of Commerce. "As the company continues to grow to serve their customers around the globe with medical advancements, so do the economic and workforce opportunities for our community."

About Thermo Fisher Scientific

Thermo Fisher Scientific Inc. is the world leader in serving science, with revenues of more than \$24 billion and approximately 70,000 employees globally. Our mission is to enable our customers to make the world healthier, cleaner and safer. We help our customers accelerate life sciences research, solve complex analytical challenges, improve patient diagnostics, deliver medicines to market and increase laboratory productivity. Through our premier brands – Thermo Scientific, Applied Biosystems, Invitrogen, Fisher Scientific and Unity Lab Services – we offer an unmatched combination of innovative technologies, purchasing convenience and comprehensive services.
